

Haldane 100 Q216MPU owned by Leslie Lucas.

The car was built by myself 20 years ago it started out with a 2 litre engine but I put a 2.9 v6 engine in it 6 years ago and also made it a flip front at the same time it works well for maintenance.

Its nice to see some more haldanes I think the most I have seen in one place is six have often wondered how many cars there are out there.

Les lucas (ak Jigsaw on the pilgrim site)

This is when I went to Scotland to pick up the kits. The green one was mine, the red one was my friends and we made them at the same time. He sold the car some time ago but the car is still around. I saw it at Le Mans in 2012 and I believe it belongs to someone in the midlands.

I think you have seen the two shells on the trailer before HALDANE. They used it in their brochure.

Our cars were one of the first Ford based kits with an 2.0 dohc EFI engine.

This is Nigel Barnicle and myself at Le Mans classics in 2012.

Some newer photos of the car.
